APPLICATIONS FOR SAILMAKING

SailPack-Viewer

SailPack-Viewer - a powerful marketing tool!

❇ The purpose of SailPack-Viewer is to create a unique and major improvement in your communication with the customer directly or through your sales network.

❇ With the SP-Viewer generator functionality you can create a single file (PPK) which displays the sails and rig together in an attractive manner.

❇ Your customer will be able to view his boat and sails in an active 3D view, from any angle and with multiple rendering options (geometry, mould aspect, panelling, full description with finishing details). This presentation can be copied or sent by email.

❇ The customer only has to download the free PPK reader (the "viewer") and open the designer's project.

❇ This second software (the "viewer") is free for redistribution. You can send it to anyone without limitation. All new versions will also be free and available via our internet site.

Material / colour

❇ The designer can allow his customer to choose the material for each panel.

❇ To change the panel material, the customer only needs to select one of the proposed materials and to click on the associated panels.

❇ The customer saves his "work" and sends back a material file that the designer will reopen to create the sail with the correct materials set.

Web export

❇ The SP-Viewer option also includes a feature to generate web presentations of your project, with logo, comments, rotating pictures…

Confidentiality:

• The PPK file does not contain any readable information about shape, outline and geometry. In addition you can associate a password with this file and allow only your customer to read the PPK file. It will not be possible for your competition or a non authorized person to read this file and study in more detail your proposal without the password.
